Supplement to Environmental Assessment

Glendive Tilapia Culture Project

III. Scope of the Project

Rather than beginning the operation with 6 - 10,000 gallon rearing tanks, the applicant may begin the project with only 2 or 3 tanks of 1,500 gallon size. The applicant may also desire to dress some fish on site at Glendive rather than only ship out live fish. This would require a land or landfill disposal of fish cleaning waste. These are the only changes contemplated from the original scope of the project described in the August 1995 EA.

V. Explanation of Potential Impacts on Physical Environment

The original explanation is still valid. There will be no significant additional effects.

VI. Explanation of Potential Impacts on Human Environment

The original explanation is still valid. There will be no significant additional effects.
